### European Macro Outlook

European equities markets had held at the previous weeks breakout highs until the poor economic data begun to appear. China led the disappointment with flash PMI figures which overshadowed positive PMI data in Europe and poor US data reignited fears surrounding the Federal Reserve's early tapering decision and whether they will continue to taper this month. The weaknesses highlighted in the emerging market currency markets on Friday sparked a global sell off as investors sought less risky assets.

Following the **Pound Sterling's** strengthening rally against the **Euro** (and other currencies) on Wednesday, after the UK unemployment figures prompted for an earlier rise in interest rates, the Euro has rebounded back to £0.83.

### Stock Index

The **Euro Stoxx 50** Index failed to make new highs before it sold off on Friday, breaking short term support at 3,050. The next support level is the bottom of the range at 2,900.

The **Euro Stoxx Index** also failed from recent highs; we note support at its previous

breakout and 2011 highs at 300.

The **German Dax** Index retraced from its long term highs to test its recent breakout level at 9,400, with support below at 9,000 from its December lows.

## Index Breadth

The **European DJ EURO STOXX % 10 Week Moving Average Breadth** Indicator has

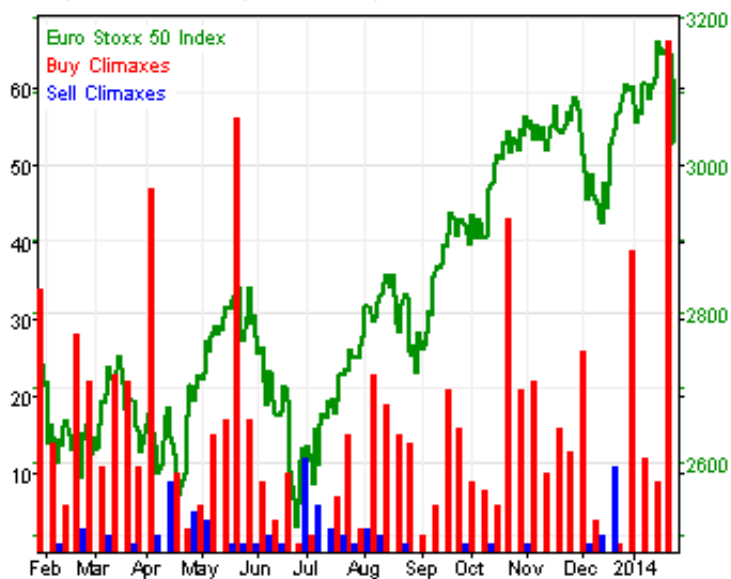

fallen from highs at the top of the range to fall to 50, having not fallen to an oversold level yet on the RSI, a further fall remains possible.

Buy / Sell Climaxes (vs STOXX50)

24 Jan 2014

We also note a large number of **buying climaxes**, more than the level posted in May 2013 before the June market failure.

## Sector Bulls & Bears

We remain bearish in the **European Energy** sector as it reasserted its short term top and made new relative lows.

The **European Banks** sector unwinds from highs, still above support from October highs, just above 140 and remains in its short term relative uptrend,

The **European Construction** sector has medium term breakout support at 300 and remains at short term relative highs.

The **European Industrial Goods** sector has unwound to test its 50-day MA to remain in uptrends.

The **European Chemical** sector failed to make new highs above its Santa rally peak at the turn of the year at 920. It begins to develop a potential double top, with a neckline at 860.

**Stock Action**

We note our most of long positions in our portfolio as they unwind into uptrend support.

**Assa Abloy** has unwound from highs to finds its 50-day MA and begun to reassert its relative uptrend.

**Hennes and Mauritz** also has unwound to just above its 50-day MA (previous dynamic support) and begun to reassert its relative uptrend.

We highlight **OMV** as it has developed its top formation as it made new relative lows, expecting a break of support at the bottom of the range at

33.

**Eramet** reasserted its downtrend after testing its 200-day MA as it unwound from overbought.

**Kering** also reasserted its downtrend after encountering its 50-day MA and early January highs after correcting from oversold.

We highlight our short in **DSM** as it broke down to make new short term lows and develop its top formation. We note 48.5 and 47 from previous levels for support having become deeply oversold.
